

Welcome to the FoldMaker Product Image Creation Tool Tops & Pants folder.

Please make sure to read the following notes before you get started with these tools for the first time.

- Close out of all open documents in Photoshop, this tool will notify you if there are documents open before you run this script.
- Please take the time to make sure all of your product images are **centered**. If you run this tool on images with more than one product, or the product is not in the center of the total image, this will produce unexpected results.
- Please take the time to make sure everything in the selected folder is **ONLY** the product images you need to make folded versions of. This script is not smart enough to understand that you only want some of the files edited. It WILL take every single **.png, .jpg, and .jpeg** in the folder and run these edits on it. It is recommended that you create a separate folder and place all of your applicable images for the script you are running into it, so you know what is going to be edited. This means a separate folder for all of your bottoms (pants/shorts/skirts/etc) product images and one for your tops (shirts/hoodies/jackets/etc) images.

Additional Notes:

- This tool is made to recognize empty folders, and folders containing no images of the .png, .jpg, and .jpeg file type. It will throw an alert if it sees one of these things.
- The script can be stopped at any time using the “ESC” escape key in the upper left corner of your keyboard. It will throw an error stating the User stopped the script.
- If this script runs into a file that has too long of a name and can’t run the program, it will notify you, leave that image open in Photoshop, and then continue on with the rest of the images in the folder.
